Charge Edition

WELDPULSE SOFTWARE

WeldPulse Software has been available since 2013 to install on Windows however, time demanded to have a version made available to all users which can be accessible on all devices, and on the go!

September 2025

As part of PetroStreet Drive, Charge Edition was then conceptualized to have a web based version of WeldPulse containing QuickWeld module available on the go. In an initial release, QuickWeld module contains 100 materials in the database with their quick welding procedure, ready to be qualified. The materials have been listed as per their ASME grades and the outcome contains siggestion of filler wire using GTAW process, electrode for SMAW process, pre-heat, and PWHT requirements as listed in ASME B31.3 based upon P-numbers. Interpass temperatures have also been suggested. Once the outcome is available, it can be directly shared through email as and when needed.

As on 1st November 2025, WeldPulse Charge edition is LIVE and available to use. Enhancements & inclusion of other modules including materials & welding electrides database are all expected during Q1 Y2026 which would cover even more of the welding jobs at hand.

We will reach you with all those updates, and till then, keep welding,

PetroStreet Drive
